

Virus Illustrations

Firstsite

Create at Home

Viruses can infect the human body and make us unwell, but they are also used to make vaccines that help us fight off diseases. We cannot see viruses with the human eye, but they can take on a variety of shapes. Some are round, others are shaped like rods or cones. Have a go at drawing your own, helpful virus. If you have some colouring pens or pencils you can also colour it in.

Materials you will need:

Paper
(any scrap paper will do)

A pen or pencil
